GREEN TIP

Consider the benefits of green cleaning products relative to indoor air quality. The U.S. Department of Interior notes that improving the indoor air quality of schools improves school performance, increases attendance, and lowers the incidence of asthma. Similar results should be expected by improving the indoor air quality of any space.

**GREEN TIP**

For living and working areas, light scents such as lavender are refreshing without overpowering the senses. For persistent odors, try a clean or fresh scent. Bathrooms and other areas of consistently strong malodors can benefit by room deodorizers or air fresheners with a little more kick to them. Try scents with hints of floral or cinnamon.

Many of today's air fresheners contain counteractants which eliminate odors, leaving a fresh scent. Sanitizers kill bacteria that can cause offensive odors. Timed air fresheners release premeasured product into the air automatically.

## SPACE SAVER

Let the fragrance of your restroom enhance your facility, not detract from it. Daily restroom cleaning with disinfectants and the application of an odor counteractant will eliminate many odor problems. For restrooms that continue to have odor troubles, heavy-duty cleaning of grout, walls and ceilings using a neutralizer, applying disinfectants and enzymes, as well as using a combination of odor control devices might be required to get to the root of the problem.

**GREEN TIP**

Water is a precious resource. In many parts of the world, including large parts of North America, it is also scarce and expensive. Improving conservation and good landscaping methods can reduce your reliance on water. Switching to ultra low-flush toilets, using flow-restrictive devices on sink taps, low-flow showerheads and other water conserving fixtures can help. If you are watering your landscaping, use micro-irrigation to supply water in non-turf areas and upgrade to state-of-the-art irrigation controllers and self-closing nozzles on hoses.

**\$\$\$ SAVER**

Your investment in a quality auto-flush system will yield cost savings, increased equipment longevity and cleaner facilities. Installation of auto-flushers typically takes an hour or less, installing over existing, manual flush hardware. Current technology provides that sensor batteries will not require replacement until 30,000 flushes or more. Additionally, auto-flushing eliminates the need for manual flushing, ensuring longer equipment life—since flush handles are often stepped on due to sanitary considerations. Finally, the more frequently used lavatory facilities will benefit by greater cleanliness, as auto-flushing occurs after every use of a commode.
